| 5.         | Database And Table        |          |
| 6.         | Python Output Screen      |          |
| 7.         | Bibliography              |          |
|            |                           | 1        |

#### **ACKNOWLEDGEMENT**

I am extremely grateful to Mrs. Namita Sahu, Teacher of Department of Computer Science for her able guidance and useful suggestions, which helped me in completing the project work, in time.

I would also like to express my heartfelt thanks to my beloved parents for their blessings, my friends and classmates for their help and wishes for the successful completion of this project.

S Aditya Sai Gunichitti Tarun Anamitra Das

## **INTRODUCTION**

"FOOD BILLING SYSTEM" This project is useful for big or small restaurants or clubs. It can track the record of customer, club members coming and using restaurant/club services. Advent of digital age has enabled us to manage enormous amount of information at our fingertips and is hassle free. Our project to support the same notion and is easy to use with little knowledge. Our project emphasis on the creation of new customer details, managing customer information and applying offers on the basis.

#### **OBJECTIVES OF THE PROJECT**

The objective of this project is to let the students apply the programming knowledge into a real-world situation/problem and exposed the students how programming skills helps in developing a good software.

- 1. Write programs utilizing modern software tools.
- 2. Apply object-oriented programming principles effectively when developing small to medium sized projects.
- 3. Write effective procedural code to solve small to medium sized problems.
- 4. Students will demonstrate a breadth of knowledge in computer science, as exemplified in the areas of systems, theory and software development.
- 5. Students will demonstrate ability to conduct a research or applied Computer Science project, requiring writing and presentation skills which exemplify scholarly style in computer science.
